# A/V Cable Set

Add an additional audio/video input to certain model WinTV-PVRs

The A/V Cable Set can be used to add an additional audio/video input to many of the WinTV-PVR boards. Normally, WinTV-PVRs come with one A/V input on their back panel. On many WinTV-PVRs, there is an A/V header which is designed to add an additional audio/video input (you need to check your board to see if it has the white A/V header). Once connected, you can then connect two audio/video inputs to your WinTV-PVR. The switching of the sources from one input to the other can be done with the WinTV2000 application or via the WinTV Select program.

Designed to fit in a PCI slot, the A/V Cable Set contains the RCA jacks and an S-Video jack for audio and video, plus a 6" cable to connect to the A/V header on the WinTV-PVR board. There are jumpers on the A/V Cable Set board, which allow it to support the WinTV-PVR-150, the WinTV-PVR-250, the WinTV-PVR-350 and the WinTV-PVR-500.

Please check your WinTV-PVR board to make sure it has a white A/V header.

Here is a picture of the A/V Cable Set installed with a WinTV PVR150MCE:

For the WinTV-PVR 150/500 (150 MCE shown above) connect the jumpers to pins 2-3 & 4-5 on the A/V Cable Set between the A/V header and audio/video inputs.

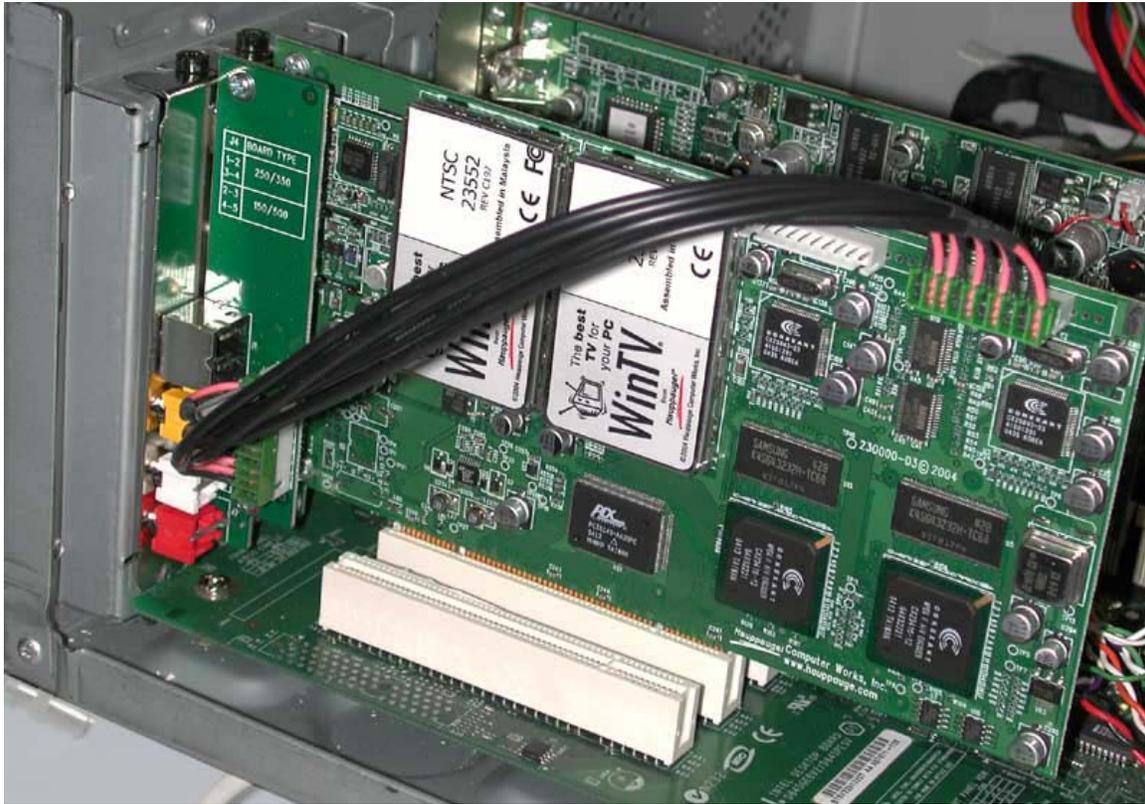

Here is a picture of the A/V Cable Set installed with a WinTV-PVR-250 (note that the connector gets installed in the left-most slot of the white A/V header of the WinTV-PVR-250/350):

For the WinTV-PVR-250/350 (250 shown above) connect the jumpers to pins 1-2 & 3-4 on the A/V Cable Set between the A/V header and audio/video inputs.

Here is a picture of the A/V Cable Set installed with a WinTV-PVR-500MCE:

For the WinTV-PVR 150/500 (500 MCE shown above) connect the jumpers to pins 2-3 & 4-5 on the A/V Cable Set between the A/V header and audio/video inputs.

Tip: Removing the 6" cable from the A/V board will make it easier to access the jumpers:

Jumpers 1-2 & 3-4 for the 250/350 boards

Jumpers 2-3 & 4-5 for the 150/500 boards
