

Internet Access via Bookmark

To avoid having to remember/check the current external IP-address or creating a DynDNS hostname, you may simply create a **bookmark** in the web browser of your client device to conveniently access **Broadway**.

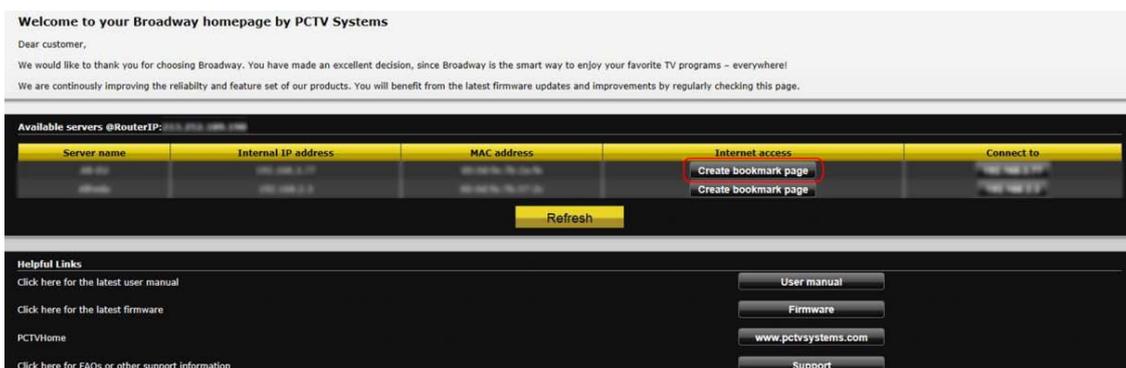

To do so, follow the instructions.

Step 1: Creating the bookmark

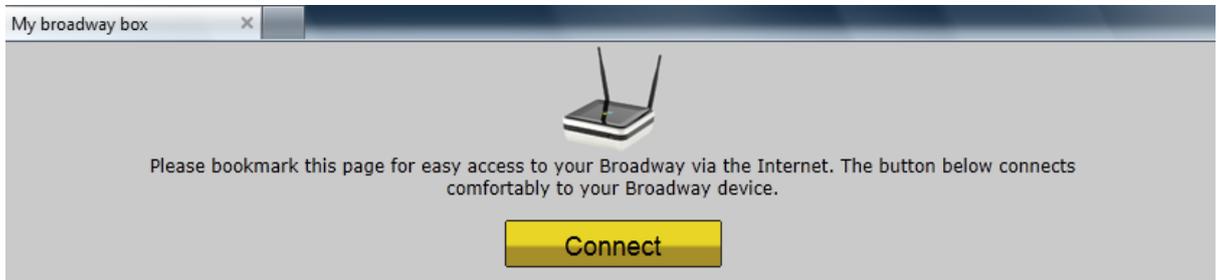

- Make sure your client device is connected to your local network (Internet connection required).
- Start the browser of your client device.
- In the URL address field type in: **distan.tv**.
- The login dialog opens.
- Enter your **TV viewing PIN**.
- Click the  button in the upper right corner.

- On the **Broadway** homepage, click **Create bookmark page**.

- Add the upcoming page to your **Favorites (Bookmarks)** in your web browser.
- Click **Connect** to connect to your **Broadway** device.

- Disconnect the client device from your local network.

Note: If you wish to access **Broadway** via internet using different client devices, you need to set **bookmarks** for each of these devices within your local network first.

Step 2: Accessing Broadway via Bookmark

Once a **bookmark** is created, you may access **Broadway** via the Internet with your client device as follows:

- Connect your client device to the Internet.
- Start the browser of your client device.
- Click your **Broadway bookmark**.
- Press **Connect**.
- Enter your **TV viewing PIN** into the login dialog.
- Enjoy **Live TV** via Internet.

Note: The default **TV viewing PIN** is **0000**.

For your safety we recommend changing this PIN as soon as possible.

For further details, see chapter: [How to Change the Broadway Login Data](#).
